### WaveSecure – Mobile Security Device

Losing your mobile phone can feel akin to losing a limb. Now, with WaveSecure, you can lock your phone remotely after you lose it. Best of all, the phone remains locked even if the SIM card is changed or the phone is turned off and restarted. If the SIM card in your lost phone is changed, the new phone number will be reported back to you, as well as any phone calls and messages – very handy. All you need is a mobile phone running a Windows Mobile or Symbian operating system. For a three-month trial, visit [www.wavesecure.com](http://www.wavesecure.com).
